

The Experts in Telecoms Data Management

Aperio's Product Execution Options

Multiple Delivery Options

Aperio knows that every business is different, and realizes that we don't live in a one size-fits-all world. That's why we provide our clients with multiple options when it comes to our products and how we deliver them.

Database Options

Aperio's products are platform agnostic, meaning they can run on any database platform you choose. Oracle, Netezza, DB2 and Teradata are all options, among others.

Data Center Options

Aperio gives you the option to run the data in:

1. One of our data centers where Aperio manages the process.
2. Your data center where Aperio manages the process.
3. Your data center where you manage the process.
4. Your data center where you and Aperio share in managing different parts of the process.

Hardware Options

Aperio's hardware options include:

1. Purchase the hardware yourself and install it in your data center.
2. Purchase the hardware and install it in our data center.
3. Have Aperio purchase the hardware and install it in your data center.
4. Have Aperio purchase the hardware and install it in one of our data centers.

Aperio Cloud

Aperio also provides the option of renting server space within the Aperio cloud. With this option, you only pay for what you use, when you need it, eliminating the potential of excess and wasted capacity. We'll also put the cloud wherever you want it and if you prefer your own private cloud, we can accommodate that as well.

Tactical & Strategic Options

Aperio offers interim and tactical, as well as long-term and strategic options. You can elect to use our product for 6 months, 12 months or 18 months as an interim solution while you build out your capabilities or you may love our products so much that you may opt for a multiple year contract. Aperio can be your interim solution or life-long partner.
